

Julia Aderemi

Backend & API Developer

juliaaderemi@gmail.com | LinkedIn | Github | Portfolio

PROFESSIONAL PROFILE

Backend developer with experience building REST APIs, authentication flows, database-backed features, API integrations, and cloud-deployed services using JavaScript, Node.js, Express.js, MongoDB, PostgreSQL, and related tools. Familiar with backend logic for user accounts, payments-related flows, role-based access, and modular application design, with growing focus on maintainable code, system reliability, and performance optimization.

EDUCATION

Babcock University

B.Sc. Computer Science (Information Systems)

CGPA: 4.76 / 5.00

Oct 2022 – Jul 2025

Ilishan-remo, Nigeria

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, C++ (Object-Oriented Programming), HTML, CSS

Backend & APIs: Node.js, Express.js, RESTful APIs, request handling, error handling, API consumption, authentication, authorization

Databases: MongoDB, Mongoose, SQL, Postgres

Tools & Practices: GitHub, Postman, JWT authentication, modular code structure, clean and scalable code

Frontend: HTML, CSS, JavaScript, Bootstrap, responsive and accessible website development

Cloud & Infrastructure: Cloud deployment, Linux/RHEL support, HPC workstation support, PRTG monitoring

PROFESSIONAL EXPERIENCE

Backend Developer

Agripeller

Aug 2025 – Nov 2025

Canada

- Built the CAC/KYC verification feature for users, supporting identity verification workflows.
- Added secure authentication features using refresh tokens and access tokens.
- Implemented an escrow feature and integrated Pystack and Stripe payment functionality.
- Contributed to backend functionality relevant to financial transactions, user trust, and secure product experiences.

Node Backend Developer

Nomira

Feb 2025 – present

- Set up the Node.js backend and implemented user login and delete functionality.
- Deployed the backend server to cloud infrastructure.
- Integrated a Django API into a Node.js API to connect services and support application functionality.
- Worked on backend logic, API routes, authentication flows, and maintainable service structure.

Cloud Engineer (High Performance Computing) Intern

Chevron Nigeria Limited

Feb 2024 – Jul 2024

Lagos, Nigeria

- Assisted in deploying 72 new HPC Supermicro workstations to enhance user experience and optimize infrastructure performance.
- Gained practical exposure to enterprise technology operations, workstation support, and infrastructure reliability.
- Supported technical tasks in a professional engineering environment with attention to performance and compliance.

SELECTED PROJECTS

Accountability Partner (A-Partner)

Goal-tracking application for breaking goals into milestones and steps, with authentication, XP rewards, streaks, and progress analytics.

- Designed backend features to support user progress tracking, authentication, rewards, and analytics.
- Used JWT authentication and a full-stack architecture to support secure user experiences.

Think Fast [↗](#)

Real-time multiplayer word game where players take turns calling letters, submitting answers, and scoring rounds together

- Built with React, Node.js, Express, Socket.IO [↗](#), and MongoDB.

CERTIFICATIONS

- Africa Agility certificate of completion [↗](#)
- Web Development with Angela Yu - Udemy [↗](#)
- Advanced Javascript [↗](#)
